## Table of Contents

Initial database of national pond contact points

### Executive Summary

The initial database of national pond contact points is a living document which will continually be updated throughout the project. For each country we have listed a person (or people) with the policy or regulatory sector with national or regional responsibility for ponds. These are generally people in a state nature organisation in a position to influence policy. We will be in regular communication with these national contacts throughout the project and will keep them updated and informed with regards to PONDERFUL findings. In some cases a national contact point for ponds has not yet been identified and we will work to fill these knowledge gaps throughout the course of the project.
